

K. SUNDARA MANIKANDAN

AWS DEVOPS ENGINEER | Chennai, India

+91 9840872480 | kmani79@gmail.com | www.maniaws.in

PROFESSIONAL SUMMARY

AWS DevOps Engineer with 3+ years of specialized cloud and DevOps experience, leveraging 20+ years of enterprise IT expertise. Experienced in designing, provisioning and automating secure, scalable and highly available AWS infrastructure using Terraform, Jenkins, Docker and Linux. Skilled in Infrastructure as Code, CI/CD automation, AWS networking, cloud security, monitoring and observability, troubleshooting and production support. Experienced in supporting application deployments and production releases across Development, QA, UAT and Production environments while collaborating with Development, QA and Operations teams to improve deployment consistency, reliability and operational efficiency.

TECHNICAL SKILLS

AWS Cloud	EC2, VPC, Subnets, IAM, S3, RDS, Route 53, CloudFront, Lambda, API Gateway, ALB, Auto Scaling, SQS, SNS, EBS, EFS, AWS Backup, CloudWatch, CloudTrail
Infrastructure as Code	Terraform
CI/CD & Build Automation	Jenkins, Git, GitHub, Maven, SonarQube, Nexus
Monitoring & Observability	Prometheus, Grafana, Amazon CloudWatch, CloudTrail, New Relic
Containers & Orchestration	Docker; Kubernetes, Amazon EKS, Helm — Knowledge
Scripting & Configuration	Bash, Shell Scripting, YAML, HTML5, CSS3, Python — Basic
Operating Systems	Amazon Linux, Windows
Networking	TCP/IP, DNS, HTTP/HTTPS, SSH, VPC, Public/Private Subnets, NAT Gateway, Internet Gateway, Route Tables, Load Balancing
Security	IAM, Security Groups, Secrets Management, Least-Privilege Access, Secure Configuration
Databases	SQL, PostgreSQL — Knowledge
Collaboration & ITSM	Jira, Confluence, Agile/Scrum
AI & Productivity	ChatGPT, Microsoft Copilot, Claude, Amazon Bedrock

PROFESSIONAL EXPERIENCE

AWS DevOps Engineer

(Official Designation: Senior Multimedia Developer)

Sify Technologies Limited, Chennai, India

Apr 2023 – Present

- Design, provision and manage **AWS** infrastructure supporting application workloads with focus on security, scalability, availability and operational stability.
- Manage core **AWS** services including **EC2, VPC, IAM, S3, RDS, Route 53, CloudFront, Lambda, API Gateway, ALB, Auto Scaling, SQS, SNS, EBS, EFS, CloudWatch** and **CloudTrail**.
- Manage AWS infrastructure activities across **Development, QA, UAT** and **Production** environments, maintaining consistency and operational readiness.
- Automate AWS infrastructure provisioning using **Terraform**, reusable modules and configuration patterns, improving deployment consistency and reducing manual infrastructure setup.

- Develop and maintain version-controlled Terraform configurations for AWS networking, compute, security groups and supporting resources, enabling repeatable and reviewable infrastructure changes.
- Build and maintain **Jenkins** CI/CD pipelines integrated with **Git**-based source control and **Maven** build workflows across Development, QA, UAT and Production environments.
- Integrate Maven build processes and **SonarQube** code-quality checks into Jenkins-based delivery workflows.
- Manage and maintain **Nexus** Repository for storing, versioning and managing build artifacts, integrating it with Maven and Jenkins CI/CD pipelines to support reliable application delivery.
- Automate CI/CD deployment workflows using Jenkins, reducing deployment time by 60%, minimizing manual intervention and improving release reliability.
- Support production releases, release validation, issue resolution and rollback/recovery activities to minimize deployment disruption.
- Coordinate with Development and QA teams to resolve build, deployment and environment issues during release cycles.
- Design and configure AWS **VPC** networking using **public/private subnets, route tables, Internet Gateway** and **NAT Gateway**.
- Configure **security groups** and controlled network access for application, administration and service communication requirements.
- Support **DNS** and application traffic management using **Route 53** and **Application Load Balancer** configurations.
- Troubleshoot connectivity issues involving routing, ports, security groups, DNS, HTTP/HTTPS and SSH access.
- Manage **IAM users, roles** and **policies** according to least-privilege access principles and application/service requirements.
- Apply secure configuration and access-control practices across AWS compute, storage, networking and application-support components.
- Support investigation and resolution of access-denied, permission and authorization issues involving IAM, S3, Lambda and API Gateway.
- Build and manage **Docker** images for application packaging and deployment workflows; knowledge of **Kubernetes, Amazon EKS** and **Helm**.
- Configure **Prometheus** and **Grafana** for infrastructure and application monitoring, metrics visualization and dashboard creation.
- Configure **Amazon CloudWatch** dashboards, alarms and logs to monitor infrastructure health, resource utilization and application-related operational issues.
- Analyze operational logs and monitoring data to identify failures, performance issues and abnormal resource behavior.
- Hands-on knowledge of **Amazon Bedrock** for exploring foundation models, generative AI capabilities and API-based integration with AWS applications.
- Perform root-cause analysis and troubleshooting across AWS infrastructure, deployment pipelines, permissions and network connectivity.
- Provide production support and follow issues through resolution while maintaining service reliability and release continuity.
- Configure EC2 **Auto Scaling** to support scalable workloads and improve application availability and fault tolerance.
- Monitor resource utilization and support right-sizing activities to balance performance, availability and cost.
- Collaborate with Development, QA and Operations teams to coordinate infrastructure changes, application deployments and production support.
- Work within Agile/Scrum processes and track technical issues, requests and work items through **Jira** and **Confluence**.
- Document deployment, troubleshooting and operational procedures to improve repeatability and knowledge sharing.

PREVIOUS PROFESSIONAL EXPERIENCE

Senior Multimedia Developer

Sify Technologies Limited, Chennai, India

Nov 2015 – Mar 2023

- Designed and developed interactive e-learning applications using Articulate Storyline and Adobe Creative Suite.
- Translated business and client requirements into interactive learning solutions and managed deliverables through completion.
- Collaborated with cross-functional stakeholders to coordinate development, review, testing and delivery activities.
- Performed application maintenance, troubleshooting and production support to maintain reliability and user satisfaction.
- Managed project deliverables and timelines while coordinating with internal teams and stakeholders.

Senior Software Engineer

09/2010 – 04/2013 | Mahindra Satyam, Chennai

Senior Graphic Designer

07/2009 – 08/2010 | Helix Technology Solutions Pvt. Ltd., Hyderabad

Associate Consultant

10/2006 – 06/2009 | Satyam Computer Services Ltd., Chennai

Senior Web Developer

04/2005 – 10/2006 | Lionbridge Technologies Pvt. Ltd., Chennai

Multimedia Developer

08/2002 – 04/2005 | Sify Ltd., Chennai

EDUCATION

Bachelor of Engineering in Mechanical Engineering

Madurai Kamaraj University, India

Oct 1997 – Nov 2002
