PROFESSIONAL SUMMARY

AWS DevOps Engineer with 4+ years of specialized, hands-on expertise in **AWS Cloud** and **DevOps** engineering, architecting, implementing, and managing scalable, secure, and highly available cloud infrastructures on Amazon Web Services (AWS).

- Proven expertise in **Terraform** for automated provisioning, configuration management, and repeatable, version-controlled infrastructure deployments.
- Skilled in designing and maintaining robust **Jenkins** pipelines that enable fast, reliable, and repeatable integration and deployment cycles.
- Skilled in **Docker** for building, deploying, and managing containerized applications.
- Strong background in system administration, performance tuning, and troubleshooting.
- Expertise in designing secure VPCs, routing, and connectivity solutions.
- Adept at streamlining release processes and reducing manual intervention.

Proven track record in delivering **production-ready cloud solutions**, automating infrastructure provisioning, implementing monitoring and logging solutions, and optimizing AWS resources for **performance, scalability, security, and cost efficiency**. Recognized for bridging the gap between development and operations to accelerate delivery and ensure reliability.

Overall Experience: 20+ years in IT, bringing deep technical expertise and cross-functional collaboration skills to enterprise environments. Keen to learn new skills, with a reputation as a **fast learner** who quickly adapts to emerging technologies and evolving business needs.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS), EC2, VPC, IAM, S3, RDS, Route 53, CloudFront, Lambda, API Gateway, Elastic Load Balancer (ALB), Auto Scaling, Elastic Beanstalk, SNS, EBS, EFS, CloudWatch, CloudTrail

DevOps & CI/CD: Jenkins, Git & GitHub, Maven, SonarQube, Nexus, Docker

Infrastructure as Code (IaC): Terraform

Programming & Scripting: Bash, Shell Scripting, YAML, HTML5, CSS3, JavaScript

Databases (Basics): SQL, PostgreSQL

Monitoring & Logging: Amazon CloudWatch, AWS CloudTrail, Nagios, New Relic

Operating Systems: Amazon Linux, Windows

Project Management & Collaboration: Jira, Confluence

AI & Productivity Tools: ChatGPT, Microsoft Copilot

WORK EXPERIENCE

Apr 2022 – Present

AWS Developer (Officially designated as Sr Multimedia Developer)

Sify Technologies Limited, Chennai, India

Key Responsibilities & Achievements:

- **AWS Cloud Infrastructure:** Architected, implemented, and managed scalable, secure, and highly available AWS environments supporting production workloads end-to-end.
- **Infrastructure Automation:** Automated infrastructure provisioning with **Terraform**, building reusable, modular templates that standardized deployments across multiple AWS environments and cut manual setup effort.
- **CI/CD Pipelines:** Built and maintained **Jenkins** pipelines to streamline integration and deployment across Development, QA, UAT, and Production.
- **Application Deployment:** Automated deployments, reducing manual effort and ensuring consistency across environments.
- **AWS Services Management:** Hands-on experience with **EC2, IAM, VPC, Route 53, S3, RDS, CloudFront, Lambda, API Gateway, ALB, Auto Scaling, Elastic Beanstalk, SNS, CloudWatch, and CloudTrail**.
- **Secure Networking:** Configured **VPCs** with public/private subnets, **NAT gateways, internet gateways, and route tables** to ensure secure connectivity.
- **Identity & Access Management:** Managed **IAM** users, roles, policies, and security groups aligned with AWS security best practices.
- **Code Quality Integration:** Integrated **SonarQube** into Jenkins pipelines for automated code quality checks.
- **Containerization:** Built and managed **Docker images** to support application deployment.
- **Monitoring & Logging:** Configured **CloudWatch** dashboards, alarms, and log monitoring; provided infrastructure troubleshooting and production support.
- **Optimization:** Right sized and tuned AWS resources on an ongoing basis to enhance performance while reducing operational costs.
- **Agile Collaboration:** Partnered with Development and QA teams in Agile/Scrum workflows to accelerate delivery.
- **Release Management:** Supported production deployments, ensuring smooth release cycles and minimal downtime.

PROJECTS:

AWS Multi-Tier Web Application Deployment

Technologies:

AWS EC2, VPC, ALB, Auto Scaling, RDS, DynamoDB, S3, IAM, SNS, CloudWatch

Responsibilities & Achievements:

- **Architecture Design:** Designed and deployed a highly available three-tier architecture on AWS.

- **Compute Scaling:** Configured EC2 instances within Auto Scaling Groups to ensure elasticity and fault tolerance.
 - **Load Balancing:** Implemented Application Load Balancer for efficient traffic distribution across tiers.
 - **Secure Networking:** Built secure networking with public/private subnets, NAT Gateway, Internet Gateway, and route tables.
 - **Database Integration:** Integrated Amazon RDS for relational data and DynamoDB for NoSQL workloads.
 - **Notifications:** Configured SNS for automated alerts and notifications.
 - **Monitoring:** Monitored infrastructure health and performance using CloudWatch dashboards and alarms.
 - **Optimization:** Tuned infrastructure for scalability, high performance, and cost efficiency.
-

AWS Serverless Image Gallery – [Live Demo](#)

Technologies:

Amazon S3, AWS Lambda, API Gateway, IAM, CloudWatch, HTML5, CSS3, JavaScript

Project Overview:

Developed a fully serverless image gallery application enabling users to securely upload, browse, and view images stored in Amazon S3. REST APIs were exposed via API Gateway and processed by AWS Lambda, with a responsive frontend built using HTML5, CSS3, and JavaScript.

Responsibilities & Achievements:

- **Serverless Architecture:** Designed and implemented a fully serverless solution leveraging AWS managed services.
 - **API Development:** Built REST APIs with API Gateway for image upload, retrieval, and listing operations.
 - **Lambda Functions:** Created AWS Lambda functions to handle backend logic for image operations.
 - **Secure Storage:** Configured Amazon S3 buckets with IAM roles and bucket policies for secure image storage and access control.
 - **Frontend Integration:** Integrated HTML5/CSS3/JavaScript frontend with API Gateway endpoints; implemented asynchronous uploads and retrieval using Fetch API.
 - **CORS Configuration:** Enabled secure cross-origin communication between frontend and backend.
 - **Monitoring & Logging:** Configured CloudWatch for logging, metrics, and alarms to monitor application health.
 - **Troubleshooting:** Resolved permission issues across API Gateway, Lambda, IAM, and S3.
 - **Optimization:** Improved scalability and reduced infrastructure management overhead through serverless computing.
-

Terraform AWS Infrastructure Automation – Nginx Web Server Deployment Technologies

Terraform, AWS, Amazon Linux 2023, Nginx, SSH, TLS Provider, Local Provider

Project Overview:

Automated the provisioning of AWS infrastructure using Terraform by creating a custom VPC, public subnet, Internet Gateway, route table, security groups, and an Amazon EC2 instance. Implemented Infrastructure as Code (IaC) to deploy and configure an Nginx web server automatically, ensuring repeatable, scalable, and consistent cloud deployments.

Responsibilities & Achievements:

- Automated AWS infrastructure provisioning using **Terraform (Infrastructure as Code)**.
- Designed and deployed a custom **Amazon VPC**, public subnet, Internet Gateway, Route Table, and Security Groups.
- Provisioned an **Amazon EC2 (Amazon Linux 2023)** instance with automated **Nginx** installation and configuration.
- Implemented **SSH key pair generation and secure access management** using Terraform providers.
- Configured network security by allowing controlled **SSH (22)** and **HTTP (80)** access.
- Utilized **Terraform data** sources to dynamically retrieve the latest Amazon Linux AMI.
- Automated application deployment using Terraform *remote-exec* **provisioners**, eliminating manual server configuration.
- Applied **Infrastructure as Code (IaC)** best practices to deliver consistent, repeatable, and version-controlled deployments.

Nov 2015 – Mar 2022

Senior Multimedia Developer

Sify Technologies Limited, Chennai, India

E-Learning Application Development

Technologies: Articulate Storyline, Adobe Creative Suite

Responsibilities & Achievements:

- **Interactive Application Development:** Designed and developed engaging e-learning applications using Articulate Storyline and Adobe Creative Suite.
- **Cross-Functional Collaboration:** Partnered with cross-functional teams to deliver enterprise learning solutions tailored to organizational needs.
- **Project Management:** Managed project deliverables, aligned with client requirements, and ensured timely delivery of learning solutions.
- **Application Support:** Performed ongoing application maintenance, troubleshooting, and production support to ensure reliability and user satisfaction.

EDUCATION

Oct 1997 – Nov 2002

Bachelor of Engineering in Mechanical Engineering

Madurai Kamaraj University, India

KEY SKILLS

AWS Cloud, Infrastructure as Code (Terraform), CI/CD Pipeline, Jenkins, Docker, Linux Administration, Serverless Computing, REST API, Amazon S3, AWS Lambda, API Gateway, Cloud Security, Cloud Monitoring, Infrastructure Automation, Production Support, Release Management, High Availability, Disaster Recovery, Cost Optimization, Agile Scrum

ACHIEVEMENTS

- Automated cloud infrastructure provisioning using Terraform, reducing manual deployment efforts.
- Built CI/CD pipelines using Jenkins, improving deployment efficiency.
- Developed a serverless AWS Image Gallery application using Amazon S3, Lambda, and API Gateway.
- Designed scalable AWS architectures using Auto Scaling and Load Balancer.
- Optimized AWS infrastructure for improved availability, security, and cost efficiency.
